

MULTIROAD JAW EB 1108

PROVEN QUALITY – GREAT FLEXIBILITY – EASY OPERATION

The mobile single-toggle jaw crushing plant with all necessary mechanical and electrical components, support structure and protection devices combines high flexibility with great efficiency in primary crushing. The plant concept allows a great variety of feed materials and a combination with further crushing or screening units to produce optimally „sized“ output for further processing. Set-up is easy, followed by a quick start-up.

FEATURES

- **Jaw crusher EB 1108**
 - Optimized crushing chamber resulting in reduced wear and long operating life
 - Hydraulically assisted gap setting
 - Crushing jaws of manganese-alloyed steel, turnable (upside down), exchangeable
- **Frequency controlled grizzly feeder with exchangeable nominal gap**
 - Wire cloth screening element beneath the grizzly to remove natural fines
- **2 way crusher by-pass chute arranged below the vibrating feeder's grizzly section for forwarding the pre-screened material via manual deflecting flap optionally to:**
 - Crusher discharge conveyor
 - Separate optional stockpiling conveyor
 - Crusher discharge conveyor (intermediate material) and separate optional stockpiling conveyor (fine material)
- **Feed hopper with foldable extensions**
- **All feed, discharge and connection chutes made of steel plate with liner**
- **User friendly maintenance**
- **Proper safety protection**
- **Operator platforms with access ladder, walkways and handrails**
 - Compact design and easy access to all equipment
- **Chassis with triple-axle bogie, air brakes, tail and side lights**
 - Easy and quick displacement between the job sites
- **Complete electrical plant**
- **Free-standing control panel cabinet with separate switchgear panel and connecting cabling**
 - Plug and play
